- Touch Projector: Mobile Interaction Through Video

- **Idea:** allow users to manipulate content on displays that

    – *do not allow Touch interaction*

    – *are unreachable*

- **How:** user points device at target display and touches an item of interest that then can be dragged to a different position or another screen

Current status

Future Work

- Map touch input on the client to mouse input on the server

- Add zoom function to improve usability

- Transfer files from server 1 to server 2 using the client

- Decrease delay
